ICF SCREW™

OUR FASTENERS ARE OVER 75% MORE VERSATILE

U2 Fasteners™

The ICF Screw™ is a bracing attachment designed for fastening temporary bracing and alignment attachments to insulated concrete forms during wall construction. Purpose-built for ICF forming, this is the fastener designed to handle the demands of the job without damaging your material or slowing you down.

KEY FEATURES & UNIQUE TECHNOLOGIES

- Reusable design for multiple applications
- Hex drive for strong, consistent installs
- Washer head for a secure, reliable hold
- Smooth thread to protect plastic ties
- Heat-resistant performance to reduce material damage
- Sharp tip for fast, easy starts

AVAILABLE SIZES

- ✓ # 8 x 1-1/2” and 3”
- ✓ #12 x 3-1/8” coming in late 2026

U2 Fasteners™

In the application shown, the ICF Screw™ passes through the timber bracing member and foam face to engage the embedded plastic web, securing the timber against the ICF block.

Select screw length and fastening locations to suit the attachment thickness and ICF system.

Follow the ICF and bracing manufacturers' installation requirements.
